

Developmental Botany Course Evaluation

Comments on any aspect of the course/my teaching are welcome. I've raised a few questions below, but don't feel limited in scope by them. Students in future years will benefit from your efforts. Thanks!

What was the most challenging aspect of the course and lab for you?

How much did you gain from this course and the laboratory component relative to the amount of effort you put into it?

What were the weaknesses of the course and lab (and how could they be minimized)?

What were the strengths of the course and lab?

Describe a discussion or class meeting that worked particularly well for you and tell me why.

Comment on the papers we read. Did the mix of papers work for you?

Comment on the relative blend of structure and independence in the lab. Did it work for you? Why or why not?
